## Chapter 1

# File Index

### 1.1 File List

Here is a list of all documented files with brief descriptions:

api\_isohfllhw.h

This file contains the Low Level Hardware functions used to safely drive the HF sub-system (ISO14443) . . . . .

9

CONFIDENTIAL

## Chapter 2

# File Documentation

## 2.1 api\_isohfllhw.h File Reference

This file contains the Low Level Hardware functions used to safely drive the HF subsystem (ISO14443)

```
#include <stdint.h>
#include "platform_config.h"
#include "drivers/isohf.h"
```

### Functions

- void \_LLHW\_isohf\_disableFc (HFCTRL isohf)
- void \_LLHW\_isohf\_enableFc (HFCTRL isohf)
- void \_LLHW\_isohf\_waitUntilExec (HFCTRL isohf)
- void \_LLHW\_isohf\_waitUntilTx (HFCTRL isohf)
- void \_LLHW\_isohf\_waitUntilRx (HFCTRL isohf)
- void \_LLHW\_isohf\_waitUntilPlatformHand (HFCTRL isohf)
- void \_LLHW\_isohf\_configSkipISOALayer3 (HFCTRL isohf)
- void \_LLHW\_isohf\_waitForRx (HFCTRL isohf, uint32\_t back\_to\_halt)
- void \_LLHW\_isohf\_launchTx (HFCTRL isohf, uint32\_t back\_to\_halt, uint32\_t silent\_time, uint32\_t tx\_frame\_size, uint32\_t end\_of\_transaction)
- uint32\_t \_LLHW\_isohf\_getSilentTime (HFCTRL isohf, uint32\_t min\_n\_val)
- void \_LLHW\_isohf\_configTxDig4TypeA (HFCTRL isohf, uint32\_t tx\_bit\_rate)
- void \_LLHW\_isohf\_configRxDig4TypeA (HFCTRL isohf, uint32\_t rx\_bit\_rate, uint32\_t RxConfig\_table[3][2])

### 2.1.1 Detailed Description

This file contains the Low Level Hardware functions used to safely drive the HF subsystem (ISO14443)

#### Author

Bettina REBAUD (INVIA)

## 2.1.2 Function Documentation

### 2.1.2.1 void \_LLHW\_isohf\_disableFc ( HFCTRL *isohf* )

Disable the HF Fc Clock

This LLHW switches off the Fc clock extractor

### 2.1.2.2 void \_LLHW\_isohf\_enableFc ( HFCTRL *isohf* )

Enables the HF Fc Clock

This LLHW renables the HF Fc clock extractor

### 2.1.2.3 void \_LLHW\_isohf\_waitUntilExec ( HFCTRL *isohf* )

Wait until the SW reaches the Exec period

### 2.1.2.4 void \_LLHW\_isohf\_waitUntilTx ( HFCTRL *isohf* )

Wait until the SW reaches the Tx period

### 2.1.2.5 void \_LLHW\_isohf\_waitUntilRx ( HFCTRL *isohf* )

Wait until the SW reaches the Rx period

### 2.1.2.6 void \_LLHW\_isohf\_waitUntilPlatformHand ( HFCTRL *isohf* )

Wait until the SW has the hand on HF digital controller

### 2.1.2.7 void \_LLHW\_isohf\_configSkipISOALayer3 ( HFCTRL *isohf* )

Skip anticollision ISOA Layer3

This LLHW allows to directly jump in ISOA Layer 4 Shall be launch before HW FSM triggering with WaitRx

### 2.1.2.8 void \_LLHW\_isohf\_waitForRx ( HFCTRL *isohf*, uint32\_t *back\_to\_halt* )

Configures and controls the HF Subsystem for catching next Rx frame

This LLHW configures the control register, sets the WAIT RX control

Caution: The IO RAM is assumed ready to be used by the HF digital controller

### Parameters

in	<i>back_to_halt</i>	Allows to return in ISO Type A layer 3 and wait for new Rx frame use HF_P_CTRL_BACK2HALT when calling the LLHW or set to 0
----	---------------------	--

**2.1.2.9** void `_LLHW_isohf_launchTx` ( HFCTRL *isohf*, uint32\_t *back\_to\_halt*, uint32\_t *silent\_time*, uint32\_t *tx\_frame\_size*, uint32\_t *end\_of\_transaction* )

Configures and controls the HF Subsystem for launching the next Tx frame

This LLHW configures the control register, sets the LAUNCH TX control

Caution: The IO RAM is assumed ready to be used by the HF digital controller

### Parameters

in	<i>back_to_halt</i>	Allows to return in ISO Type A layer 3 and wait for new Rx frame use HF_P_CTRL_BACK2HALT when calling the LLHW or set to 0
in	<i>silent_time</i>	Defines the number of slots to be waited before Tx frame sending 0 to 15 - no check on the value
in	<i>tx_frame_size</i>	Defines the Tx frame size in RAM buffer 1 to 0x400 - no check on the value
in	<i>end_of_transaction</i>	Removes the Tx to Rx automatic reversal use HF_P_CTRL_ENDOFTRANSAC when calling the driver or set to 0

**2.1.2.10** uint32\_t `_LLHW_isohf_getSilentTime` ( HFCTRL *isohf*, uint32\_t *min\_n\_val* )

Get the Silent Time Ts depending on current slot timer read value

To be done before Tx launch

### Parameters

in	<i>min_n_val</i>	the LLHW will set the silent time such as to be reached the min_n_val in any case. Shall be set to 8 or 9
----	------------------	---

### Returns

the LLHW returns the silent time to be used

**2.1.2.11** void `_LLHW_isohf_configTxDig4TypeA` ( HFCTRL *isohf*, uint32\_t *tx\_bit\_rate* )

Front-end digital selection for Type A - Tx

This LLHW selects the :

- OOK or BPSK modulation (Tx)
- bit rates Configures and controls the HF Subsystem for catching next Rx frame

It keeps the last Rx configuration. This LLHW configures the control register, sets the WAIT RX control

#### Parameters

in	<i>tx_bit_rate</i>	Bit rate from 106 to 424 use DSI 0 = 106 kbits/s 1 = 212 kbits/s 2 = 424 kbits/s
----	--------------------	--

2.1.2.12 void \_LLHW\_isohf\_configRxDig4TypeA ( HFCTRL *isohf*, uint32\_t *rx\_bit\_rate*, uint32\_t *RxConfig\_table*[3][2] )

Front-end digital configuration for Type A - Rx

This LLHW configure the threshold of the \$RX\$ decoder.

#### Parameters

in	<i>rx_bit_rate</i>	Bit rate from 106 to 424 use DRI 0 = 106 kbits/s 1 = 212 kbits/s 2 = 424 kbits/s
in	<i>RxConfig_table</i>	Table with 2 entries containing the Rx configurations for the whole Rx bit rates <ul style="list-style-type: none"> <li>Counter threshold [HFCTRL_DIGITAL_CNT0_CFG, HFCTRL_DIGITAL_CNT1_CFG]</li> </ul>
